Safety Relief Valve - PV 60

Introducing the Evolution of the Safety Relief Valve

**US Patent
7,077,157 B2**

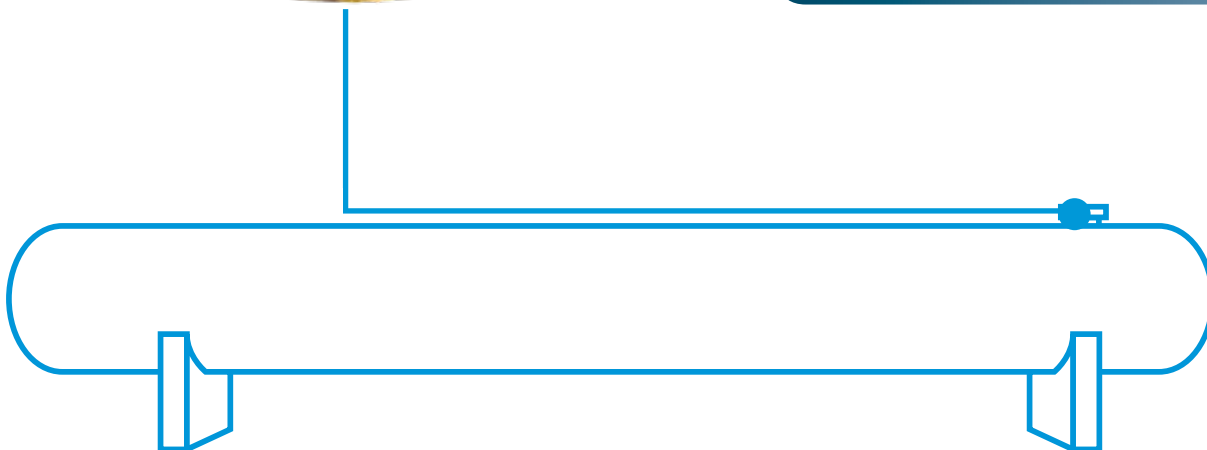

Replaceable cartridge eliminates the need to change the entire relief valve!

Tank evacuation for relief valves replacement is no longer necessary!

Provides a safe, tighter seal with less deterioration than ordinary relief valves!

Save money by replacing a cartridge instead of changing an entire valve!

**For 18,000
and 30,000
Gallon
Tanks**

PV60

Traditional pressure relief valve

The PV60, a new PV safety relief valve for large tanks, introduces an innovative new feature - a replaceable cartridge. Replacement of the entire safety relief valve or the use of a multi-port is no longer necessary. The PV 60 valve has both economic and operational advantages. It is now more cost effective and easier to perform periodic maintenance on tanks, even if the tank is pressurized. A tighter seal is also maintained with less deterioration than traditional safety relief valves. The PV60 is made for markets where safety relief valves are subject to periodic replacement, but it has also had success on the global market thanks to its durability and performance.
